

Due for an upgrade?

So is Alberta.

We live in a world of constant updating and change — from software to social networking. So it might surprise you to know it's been over 20 years since Alberta's last major transmission system upgrade.

You've probably heard a lot about the upgrades, and there are a few things you should know.

Major upgrades will enable economic growth in the future and ensure the system's reliability for all Albertans. Upgrades will also allow Alberta to utilize the latest renewable and low emission energy sources.

The upgrades are critical for our province's future. We know this because we're responsible for Alberta's entire power grid. We're the AESO, the Alberta Electric System Operator. We're an independent, not-for-profit organization. We don't own or have a financial interest in any power facilities, and we act in the public interest of Albertans.
