

Let's be certain about our electricity.

It's easy to take electricity for granted. After all, we've come to expect power at every flick of the switch, without fail.

You've probably heard a lot about Alberta's proposed power system upgrades, and there are a few things you should know.

Over 20 years have passed since Alberta's last major electrical upgrade. Major upgrades are needed now to enable economic growth in the future and ensure the system's reliability for all Albertans, every day. Upgrades will also allow Alberta to utilize the latest renewable and low emission energy sources.

The upgrades are critical for our province's future. We know this because we're responsible for Alberta's entire power grid. We're the AESO, the Alberta Electric System Operator. We're an independent, not-for-profit organization. We don't own or have a financial interest in any power facilities, and we act in the public interest of Albertans.
